SIP Header Konfiguration

This is our standard SIP trunk header configuration.

Inbound SIP Header

Name	Value
Inbound User-Provided Number	P-Preferred-Identity (PPI) or FROM Header
Inbound User-Provided Redirecting Number	Forwarder's NPN / Received Diversion

Beware: Inbound means the direction from your SIP client to our SIP server.

Outbound SIP Header

Name	Value
Outbound From-Username Field	UPN (User-Provided-Number)
Outbound From-Display Field	Received Display-Name
Outbound PAI-Username Field	UPRN (if set) or NPN
Outbound PPI-Username Field	NPN (Network-Provided-Number)
Outbound Diversion Header	UPRN (User-Provided-Redirection-Number)
Outbound History-Info Field	UPRN (User-Provided-Redirection-Number)
Outbound To-Username Field	Called user

Beware: Outbound means the direction from our SIP server to your SIP client.

Other Values

Name	Value
Use valid Alias CLI as NPN	yes
Incoming Dialed Number Matching	Extended matching, send dialed number with extension
Add user=phone to calling number	no
Add user=phone to calling number	no
Skip UPN check on Diversion	yes (If user in received Diversion or History-Info is in callers's alias list)
